

Learning Management System (LMS)

SIBACA blends LMS in its teaching learning practices to give a technological advantage to the students. The study material in various forms (Notes , PPT, Question bank, Case study, video clips etc.) are shared with students.

Learning management System (LMS) includes FTP server, Google classroom, mails, online communication applications.

Students are given access to e-learning resources through personalized ID password through the library. E-learning resources also includes e-books, e-journals along with study materials shared by subject faculty.

Apart from study materials LMS covers teaching learning planning.

It contains

- Study Material
- Academic Calendars
- Lesson plans
- Class Time tables
- Examination Schedules/ timetables
- Co curricular and extracurricular activities schedule.

At the start of each semester a detailed course pack is prepared by the concerned subject faculty which includes Session plans as well as study material and the same is made available to the students through the e-learning framework. Through LMS students get a complete plan of session and they can refer the study material and get prepared before the particular session. This will help to create curiosity in the students and also they are able to contribute additional knowledge during the session. This results in making entire learning process in interactive mode. Information & Communications Technology (ICT) enabled teaching methodologies are followed by the faculty members in class rooms

This facilitation is supported by providing student with access to the computer lab (multimedia center) available in institute and a campus-wide WiFi at no cost.

LMS is also used to communicate with students on regular basis for sharing there progress as well as other details.
